Connecting the river with the land by bringing content from the river bed on to the jetty, and using the jetty to talk back to the river.

**Patterns from water**

*Layout for pathway*

We want to capture the movement of water onto the existing paving stone surface. A new pathway weaves through planting mounds and seating boulders, arranged like islands, subsuming existing maritime objects and lamp posts giving them added prominence and purpose.

**Reimagining Butler’s Wharf**

*Hayatsu Architects & Stinsensqueeze*

**Historical narrative**

*Along the pathway*

A continuous curved line of text will be permanently imprinted onto the existing stone paving for the entire length of jetty narrating local histories, using road marking paint as application method. Specific quotes will be selected from various sources and different eras of the wharf’s past.

**Community involvement**

*Mudlarking*

We are interested in collecting paving materials from the river with volunteers from the local community. Stones, broken tiles, discarded small objects will be gathered through a series of workshops in order to create mosaic paving incorporated in the design.

**Recreational and reimagining materials**

*Seating, water fountains, driftwood*

To continue the idea of representing the geology of the Thames, enlarged replicas of pebbles which have been eroded to form a smooth surface found on the riverbed will make up new seating and water fountains. In addition to this, driftwood is placed as vertical markers in the planters, adding height to the landscape.

**Vegetation influenced by Prospect Cottage**

*Planting*

The planting bed is lined with pebbles, as in Derek Jarman’s garden in Dungeness. Ground hugging sea kale, geranium and juniper are characterful and bonsai-like. Resilient and tough plants like feathery grass and sedges create low volume so as not to obstruct the view. Fragrant evergreen herbs like lavender, prostrate rosemary and hyssop attract insects.

Connecting past to present
Graphic identity, typeface, signage

Following the same logo / letterform construction process as that used for the development of the Blue Market Bermondsey logo, the new logo for Butlers Wharf merges letterforms from different periods of time. Looking closely at the letterforms currently found on the Butlers Wharf buildings and structures, and past letter forms found in stone carving around the borough. To avoid adding new structures to the site for economical, environmental reasons, the idea for way finding and viewing points is that the signs are attached to existing lamp posts and railings. For all typographic stories we would like to collaborate with Bermondsey based storytellers Vanessa Woolf and Nigel of Bermondsey.

Preserve and enhance existing
Mosaic paving, maritime objects, lighting

Existing stone pavers will be reused for the new mosaic pattern on the floor by breaking it into smaller pieces, to be mixed together with the mudlarking findings. Existing maritime objects stay where they are and are incorporated into the new planting beds. Existing lamp posts to be reinstated using solar energy sourced LED lamps. New low level bollard lights in the planters and floor recessed path lights along the jetty illuminate the jetty, adding more ambient light.
